

Head nod recognition · 3 s sliding-window protocol

Pitch axis fixed for nod. Amplitude threshold selected on human DEV by balanced accuracy, then applied once to TEST.

TEST 95% CI [0.480, 0.619] includes 0.500, so the rule is not distinguishable from chance on TEST.

F1 under each label is TEST F1 · 15 clips per split · 435 windows
bars on the selected rule are 95% intervals from resampling clips

TEST, selected rule

	Predicted no	Predicted nod
Actual no	142	224
Actual nod	20	49

balanced accuracy 0.549
P 0.179 R 0.710 F1 0.287
